Solara Chum

Bay Area, CA — 209–637–6037 — vchum57@gmail.com — linkedin.com/in/solara-chum

Education

University of California, Santa Cruz — Santa Cruz, CA
B.S. in Computer Science — Graduated: *June 2026*
Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Game AI, Full Stack Web Development, Database Systems, Artificial Intelligence, Natural Language Processing, Applied Machine Learning

Technical Skills

Languages: JavaScript, TypeScript, C++, Python, Java, C, C#, Swift, HTML, CSS
Frameworks / Tools: React.js, Next.js, Node.js, Flask, FastAPI, tRPC, Tailwind CSS, SwiftUI, Vitest, Docker
Databases / Cloud: PostgreSQL, DynamoDB, AWS

Experience

Oasis Archery — January 2026 – May 2026
Backend Developer Intern — *Stockton*, CA

- Developed backend features for ARROWLYTIX, an archery management platform that centralizes training sessions, athlete scores, and performance trends for a club serving **300+ members**.
- Built **Flask API routes** in Python to support athlete progress tracking, score submission, and retrieval of training history from a PostgreSQL database.
- Optimized **PostgreSQL** queries and indexing for athlete-history retrieval, reducing average response time by **30%**.

Chinchilla AI — July 2025 – Aug 2025
AI Software Intern — Remote

- Built product features through a **FastAPI** backend and **React** frontend, connecting user workflows to AI-assisted code generation and iterative refinement tools.
- Designed **REST API** endpoints for LLM-assisted code generation, integrating **Claude** into backend workflows for prompt handling, response processing, and iterative refinement.
- Evaluated **100+ generated outputs** and used recurring failure cases to improve prompt construction, response processing, and error handling.

Bright Sparks Academy — May 2025 – July 2025
Software Development Intern — *Cupertino*, CA

- Developed full-stack scheduling features using **React, HTML/CSS** for an online tutoring platform, enabling students and tutors to manage availability and bookings.
- Implemented **Node.js API endpoints** and data-handling logic for creating, updating, and retrieving availability and booking records.
- Tested and debugged **20+ student and tutor scenarios**, resolving **10+ workflow defects** before deployment.

Projects

NBA MVP Predictor — *Python, Scikit-Learn, Flask, Pandas, BeautifulSoup*

- Built **Random Forest and Gradient Boosting** regression models in **Scikit-Learn** to predict MVP winners.
- Validated with season-based **cross validation** with a **96%** accuracy rate in the top 3 across 40+ seasons.
- Built a **Flask** web app comparing predicted and actual rankings by season, with a mobile-friendly layout.

Anywear Shopper Dashboard — *TypeScript, React, tRPC, DynamoDB, AWS*

- Built a full-stack shopper operations dashboard using **TypeScript, React, tRPC, DynamoDB, and AWS** to support order search and filtering across **1,000+** order records.
- Developed type-safe **tRPC backend APIs** with DynamoDB-backed filtering and cursor-based pagination for efficient order retrieval.
- Wrote **10+ Vitest** tests for API routes and frontend data flows, validating pagination, filtering behavior, and dashboard reliability.

Mood-Based Music Search — *Python, FastAPI, NLP, Sentence Transformers*

- Built a **FastAPI** music retrieval application that recommends songs from natural-language descriptions of moods and situations.
- Filtered and prepared metadata from a dataset of **1M+ songs**, and then used **all-MiniLM-L6-v2** sentence embeddings and cosine similarity to rank songs based on lyrics, mood tags and audio features.
